I am a programmer who focuses on website design and development. However, my background in programming has quite the breadth of exposure from not only my education but my eagerness to learn and accept challenges. The constant learning is a natural thing in this field, but it continues to improve my ability to learn fast and adapt in situations stressful or not. I work hard and strive to be the person that can be looked at as the "go to guy" anytime something needs to get done.

Skills

Languages and Frameworks

Design Software

Front-End:
HTML
CSS & SASS
